

HANDHELD WORK LIGHTS

INNOVATIVE DESIGN - RUGGED DEPENDABILITY

Electronic Ballast

Jameson was the first lighting manufacturer to incorporate electronic ballast technology into portable fluorescent lights.

This innovation eliminated cumbersome starter canisters, significantly reduced heat output and provided flicker free lighting that will not interfere with tone test equipment.

Superior Impact Resistance

Uniquely designed handles and end caps, combined with a patented lamp socket technology, provides superior impact resistance.

The shatterproof, protective tube shield protects the lamp, resulting in the most dependable and durable line of work lights available.

Easy Portability

Jameson's lightweight work lights include hanging hooks for hands-free operation.

110VAC
60 Hz

INVERTER

Operates light off vehicle's 12 Volt DC power source

Jameson Part	NSN	Twin Lamp High Intensity Work Lights Non Stringable
